ALOAS is a voluntary partnership formed between the City of Auburn, Lee County, the City of Opelika, Auburn University, and the City of Smiths Station to facilitate the sharing of information between its respective watershed and stormwater management programs and the citizens they serve.

This brochure is one of a series of publications regarding storm water issues in Lee County.

The series is produced by the ALOAS Storm Water Advisory Panel and is intended to protect, maintain, and restore the chemical, physical, and biological integrity of local waters in order to enhance the quality of life for our citizens.

“Local Citizen Groups and Governments Working Together for Clean Water”
Information about water levels and stream flow is a valuable tool for outdoor recreation. The gages on our local streams provide a great way to plan a canoe or kayaking float or even a fun fishing adventure. Knowledge of the water level can determine if the trip will be a success or a failure. Not enough water in the stream will usually lead to not much fun and a lot of frustration, while too much water can be extremely dangerous! It is wise to be aware of the safe levels to paddle a stream.

To find out the water level and stream flow in your local stream, visit USGS WaterWatch
